

ELECTRONIC PRIMER TRAY VIBRATOR

Here is the P/W Primer Tray Vibrator which has been requested from many P/W users.

This vibrator is similar to the competitors except it is much quieter and not so obtrusively loud to become annoying.

The vibrator has an ON/OFF switch and LED's to identify when power is on and when the vibrator should be working. It is fused and comes with an 110V AC/DC transformer.

These are available at \$99.00 each and take about 10-15 minutes to mount. The biggest obstacle to mounting this is the time it takes to remove the primers from the primer tray. A good time to install would be at this point.

A parts bag is included with the purchase with everything needed to mount and replace one existing bolt and screw, and thumb screws.
